

# Lecture #17. 스크롤링

2D 게임 프로그래밍

이대현 교수

한국공학대학교  
TECH UNIVERSITY OF KOREA

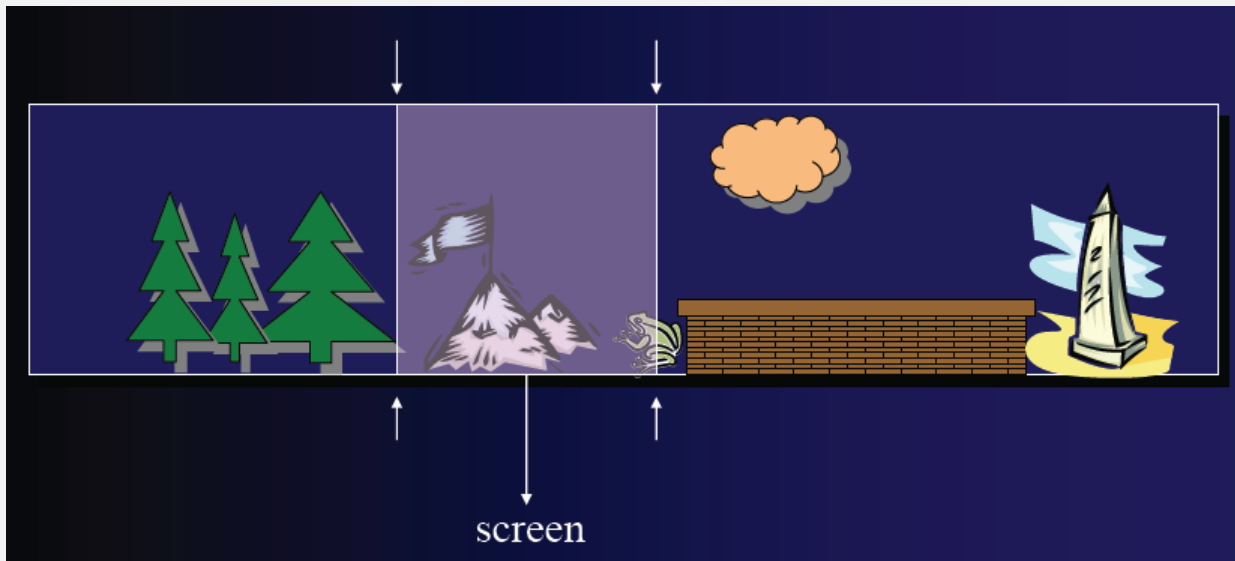

# 학습 내용

---

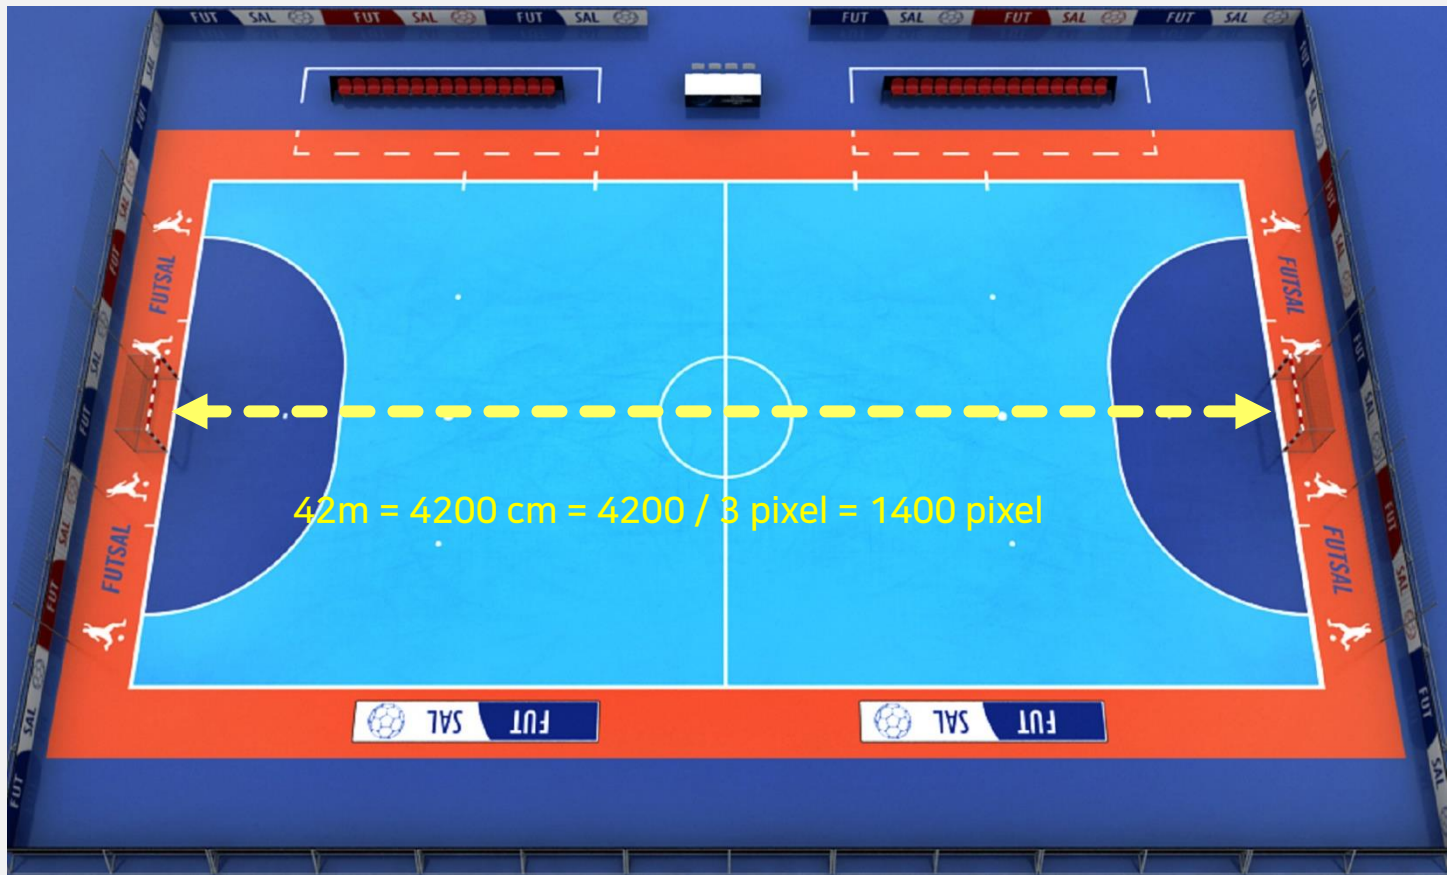

- 스크롤링
- 타일맵 기반 스크롤링
- 무한 스크롤링
- 시차 스크롤링

# 스크롤링(Scrolling)

- 그림이나 이미지의 일부분을 디스플레이 화면 위에서 상하좌우로 움직이면서 나타내는 기법.

# 게임 맵은 반드시 실제 물리값으로 크기가 표시되어야 함.

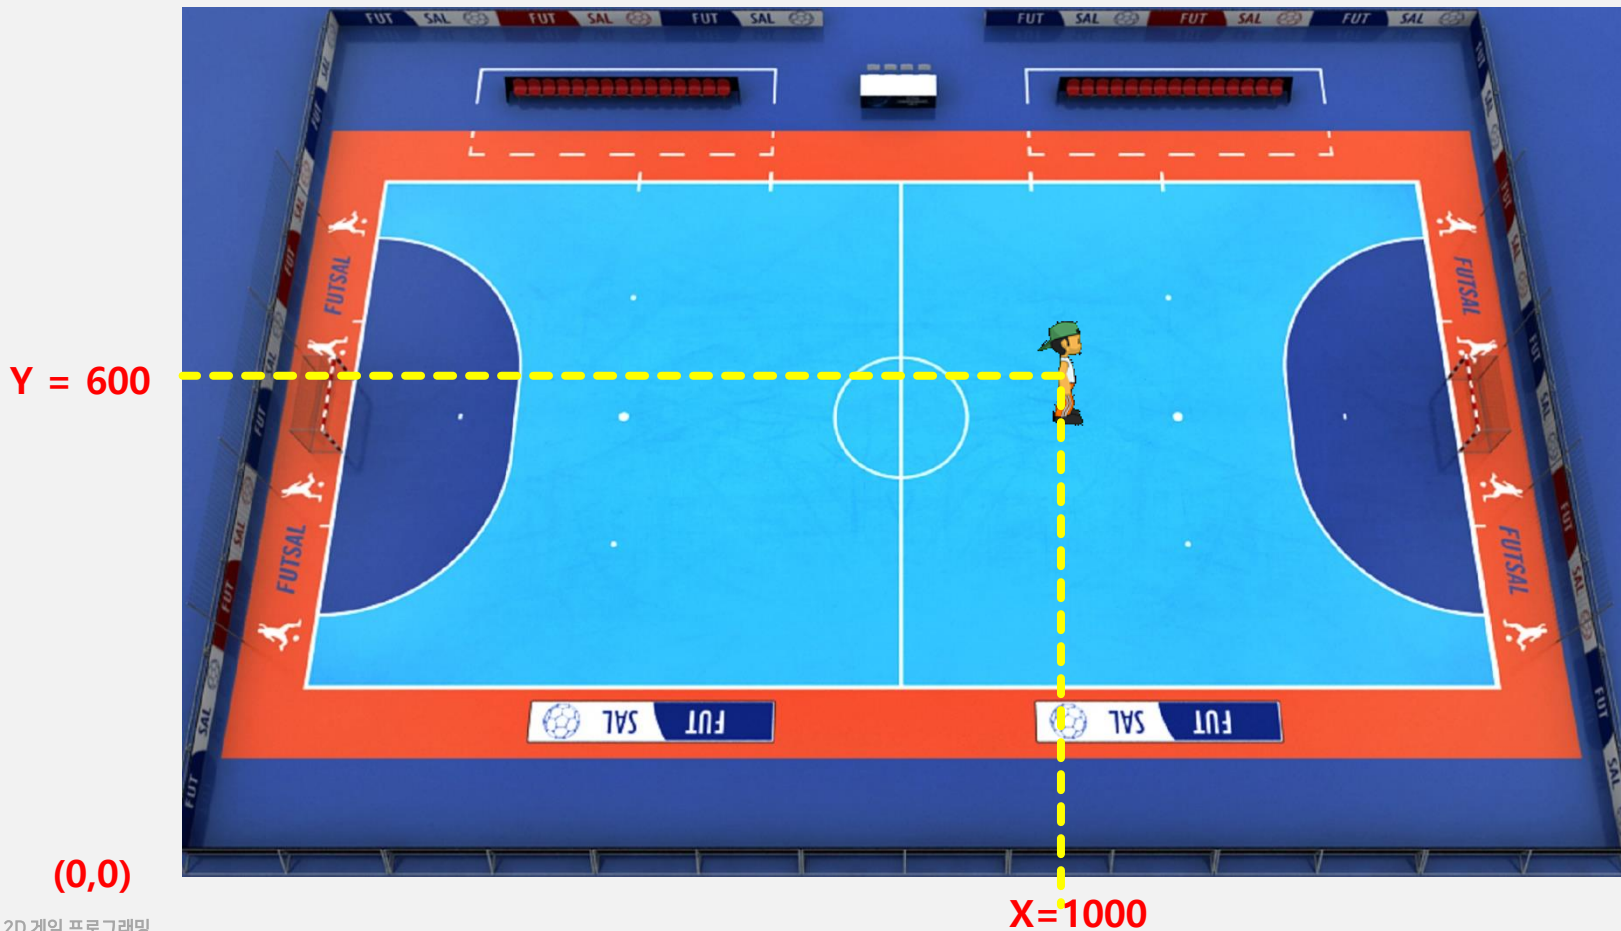

# 실제 좌표와 화면 좌표를 분리 처리

# 실제 공간 좌표 - 객체의 실제 좌표 계산할 때,

# 화면 좌표 - 화면 상에 그릴 때

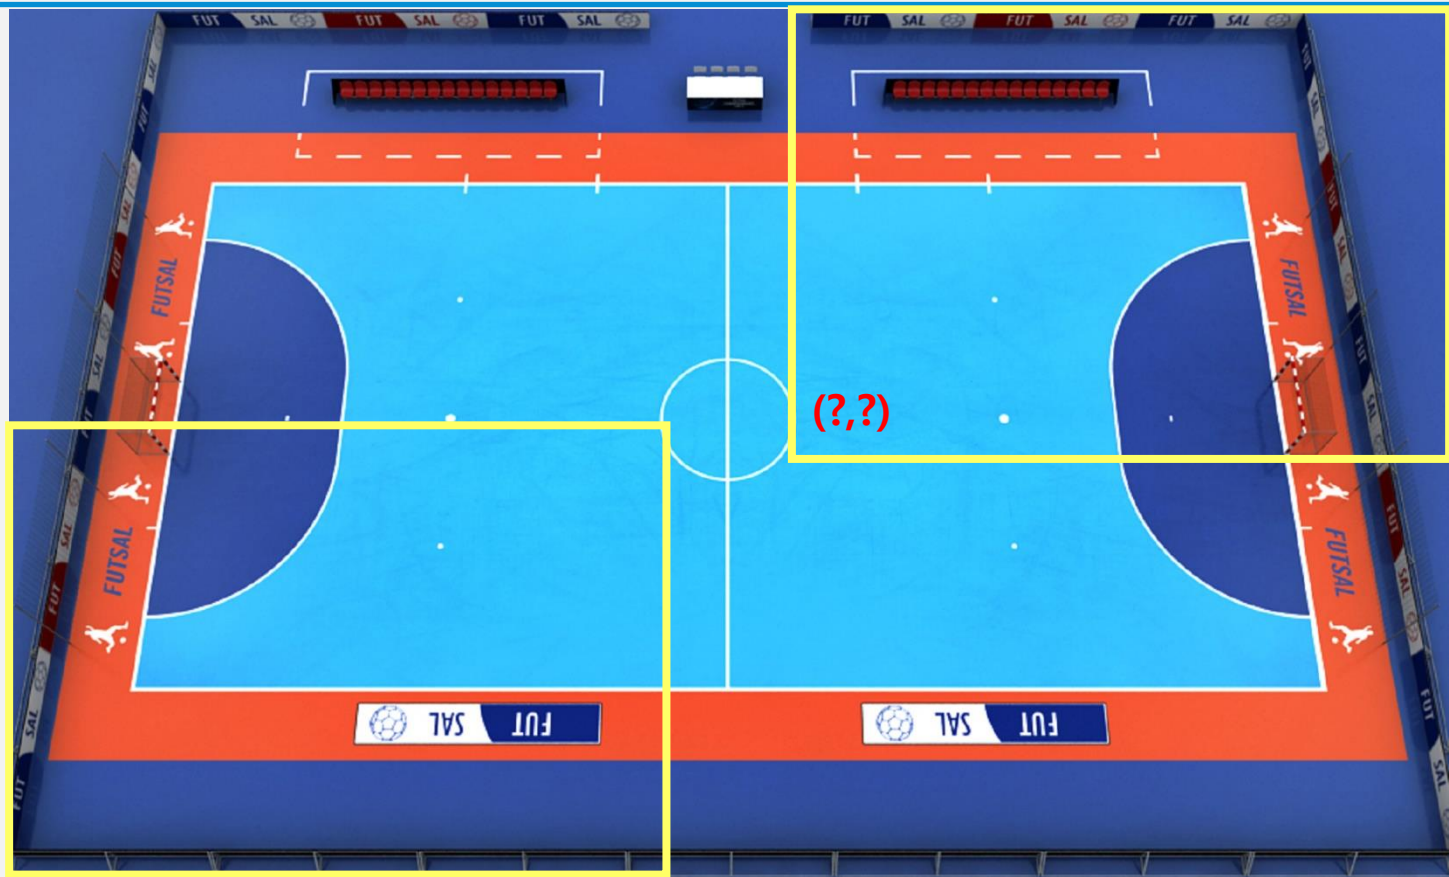

# 퀴즈 - 클리핑 영역 계산

# 클리핑 영역이 물리 공간을 넘어서면?

# 실제 가능한 클리핑 영역은?

# 스크린 윈도우를 이용한 스크롤링

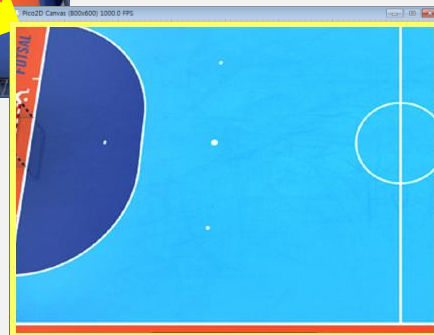

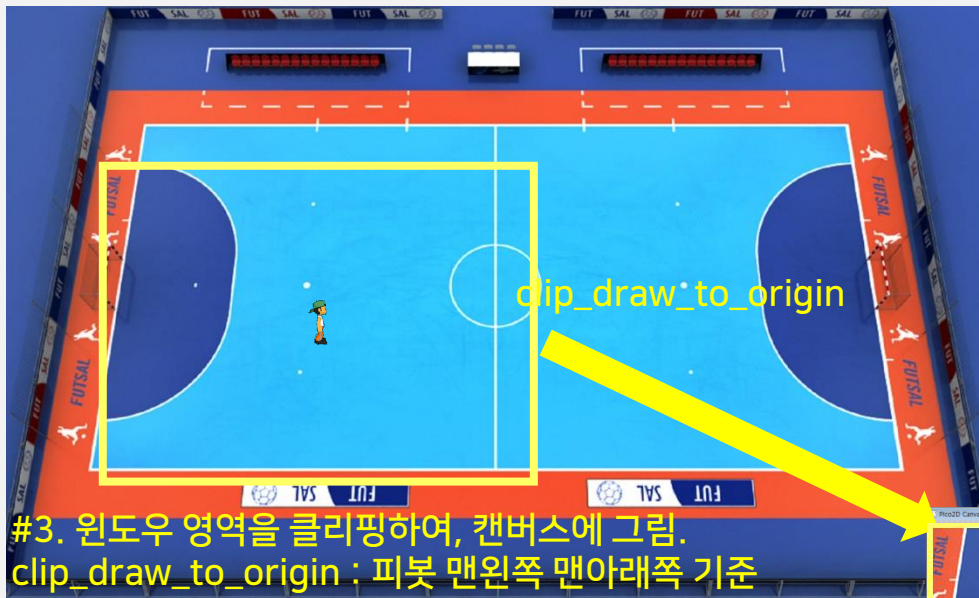

#2. 플레이어를 가운데에 놓고, 맵 상의 윈도우 좌표를 계산

window\_left, window\_bottom

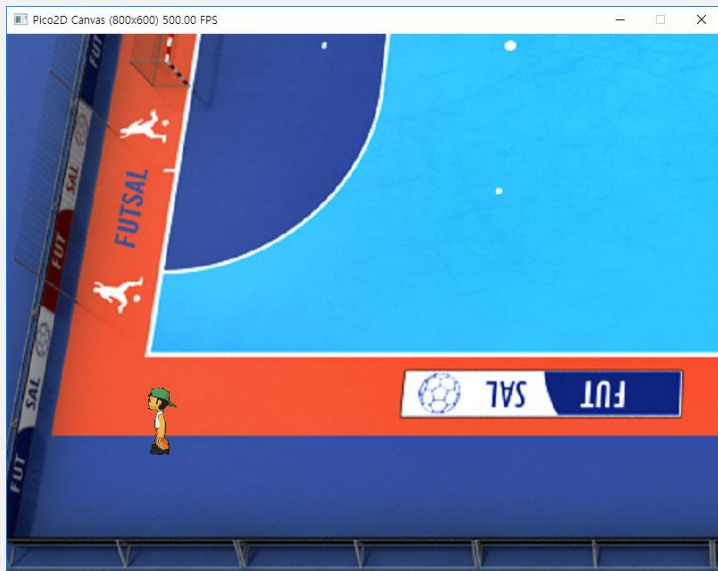

$x = \text{canvas\_width} // 2$ ,  $y = \text{canvas\_height} // 2$

y - window\_bottom

x - window\_left

상하좌우 스크롤링!

# clamp 함수

---

```
def clamp(minimum, x, maximum):  
    return max(minimum, min(x, maximum))
```

```
from boy import Boy
# fill here

# 시차(視差) 스크롤링(Parallax Scrolling)

- 물체와 눈의 거리에 따라, 물체의 이동속도가 달라보이는 효과를 이용하여, 3차원 배경을 흉내 내는 기법.
- 1982년 “Moon Patrol”이라는 게임에서 세계 최초로 사용됨.

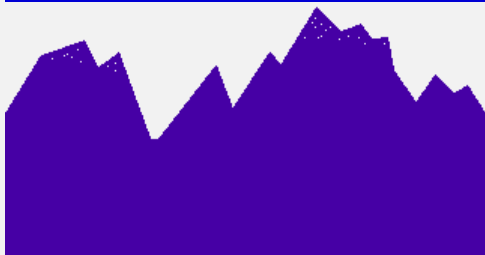

- 밤하늘, 뒷산, 앞산의 스크롤링 속도를 다르게 함으로써, 3차원적인 깊이 효과를 구현.

# 시차 스크롤링 방법

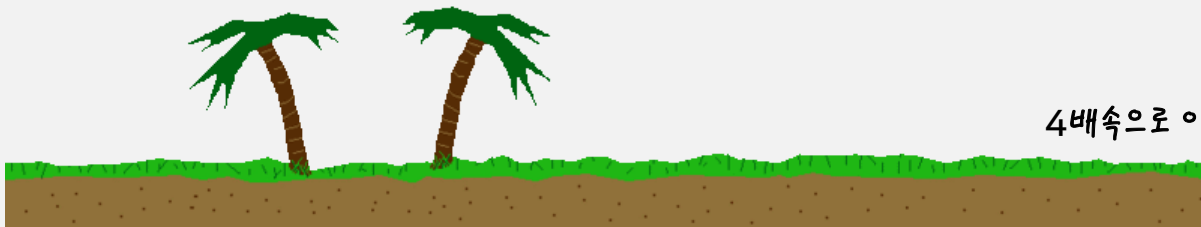

1배속으로 이동

2배속으로 이동

3배속으로 이동

4배속으로 이동

```
